

VACANCY

About Intrinsic ID

Intrinsic ID is the world's leading digital authentication company, providing the Internet of Things with hardware-based root-of-trust security via unclonable identities for any IoT-connected device. Based on Intrinsic ID's patented SRAM PUF technology, the company's security solutions can be implemented in hardware or software. Intrinsic ID security, which can be deployed at any stage of a product's lifecycle, is used to validate payment systems, secure connectivity, authenticate sensors, and protect sensitive government and military systems. Intrinsic ID technology has been deployed in more than 100 million devices. Award recognition includes the Frost & Sullivan Technology Leadership Award and the EU Innovation Radar Prize. Intrinsic ID security has been proven in millions of devices certified by Common Criteria, EMVCo, Visa and multiple governments. Intrinsic ID's mission: "Authenticate Everything." Visit Intrinsic ID online at www.Intrinsic-ID.com.

Screening policy

All applicants responding to this vacancy are subject to administrative screening. Depending upon the vacancy, the screening may consist of any of the following checks: verification of references, authenticity of identification documents and diploma(s) and receipt of a Certificate of Good Conduct (or equivalent). Further assessment of the skills applicable to the vacancy may also be required.

Senior Verification Engineer

Job description

As a verification engineer on our team, you will work closely with hardware and software engineers, to support development, testing and verification of Intrinsic ID's security solutions and products. You will be working on new security-oriented hardware designs and system solutions that are built around the principle of SRAM PUFs.

Responsibilities

- Define and implement automated verification of
 - Hardware IP blocks (simulation and on FPGA)
 - Embedded software modules (on multiple microcontroller platforms)
 - Combination of hardware and software
- Guide and assist design engineers in implementing requirements for the verification process
- Document and maintain the verification systems and equipment
- Maintain build system and continuous integration

Required experience and skills

- Bachelor/Master degree with at least 5 years of relevant professional experience
- Experience with hardware IP verification (regression tests) and/or with embedded software verification (continuous integration)
- HW and/or SW tool knowledge: Vivado, Modelsim, GCC, other embedded software compilers
- Excellent oral and written English

Other appreciated qualities

- Experience with security and cryptography
- Experience with VHDL, Verilog, Go
- Experience with systems like Gitlab, Linux and Docker
- Affinity with hardware and embedded software development

Soft skills

- Good communication skills
- Good organizational skills and excellent problem-solving abilities
- Able to think outside the box: find unexpected ways to solve problems or meet requirements
- Entrepreneurial spirit with an open mind
- Dynamic drive to contribute to expand the company
- Professional disposition: able and willing to work in a team and take responsibility for own tasks
